**Hi-Pon 80-11 Vinyl Ester Concrete Primer** is a three-pack, chemical resistant vinyl ester coating. It is designed to promote adhesion to properly prepared concrete substrates. Suitable for use as primer in atmospheric and immersed environments.

It is used as primer for polyester and vinyl ester coating systems. Designed for use in the internal lining of chemical storage tanks and pipes, and for structural steelwork in environments where superior resistance to chemical attack is required. Suitable for use in most aggressive environments.

**General Properties**

</table>

All surfaces should be clean dry, and free from contamination. The surface should be assessed and treated in accordance with ISO 8504. Oil or grease should be removed in accordance with SSPC-SP1 solvent cleaning.

**Concrete**

Abrasive blasting or scarification to remove laitance and surface contaminants is recommended. Concrete must be thoroughly cured and dry at time of application. It must be free of oils, curing solutions, dust and mold release agents. Use ASTM D 4263 (plastic sheet test method) to ensure concrete is moisture free. If moisture is detected, re-test until dry.

**Other Surfaces**

The coating may be used on other substrates. Please contact your local Nippon Paint office for more information.

Avoid paint application when the temperature is below 10°C and relative humidity is above 80%.

The temperature of surface must be minimum 3°C above dew point of surrounding air. When surface temperatures exceed 35°C, Hi-Pon 80-11...
should be overcoated as soon as hard dry to avoid intercoat adhesion problems.

APPLICATION GUIDE

Mixing Ratio

Base : Accelerator : Hardener = 100 : 0.4 : 1.8 (by weight)

Base and Accelerator should be mixed thoroughly before adding Hardener.

Pot Life

(Pot life will vary substantially with temperature)

Theoretical Coverage

0.20 kg/m² at 100 μm DFT

Thinner

Do not thin

Cleaner

Hi-Pon Vinyl Ester Thinner

APPLICATION METHOD

Airless spray is recommended for application. Brush and roller are recommended for stripe coating and small areas. Care must be taken to achieve the specified dry film thickness.

APPLICATION DETAILS

Airless Spray

Tip Size : 0.019” – 0.025”
Pressure at nozzle : > 70 kg/cm²

Typical Thickness

Concrete
50 – 100 μm dry film
72 – 143 μm wet film

Drying Time

<td>1 hour</td>
<td>4 hours</td>
<td>6 days</td>
<td>4 hours</td>
<td>6 days</td>
</tr>
</tbody>
</table>

The given data must be considered as guidelines only. The actual drying time/times before recoating may be shorter or longer, depending on film thickness, ventilation, humidity, underlying paint system, requirement for early handling and mechanical strength etc. A complete system can be described on a system sheet, where all parameters and special conditions could be included.
The following paint system is recommended for Hi-Pon 80-11 Vinyl Ester Concrete Primer:

**Top Coat:**
- Hi-Pon 80-09 Novolac Vinyl Ester GF
- Hi-Pon 80-12 Vinyl Ester Lining

For the choice of coating system for different application, refer to the product brochure or contact Nippon Paint for professional recommendation.

<tr>
<td><strong>Container Size</strong></td>
<td>20 L</td>
<td>0.1 L</td>
<td>0.5 L</td>
</tr>
</tbody>
</table>

### Storage

- **Shelf life:**
  - Base: 6 months (25°C)
  - Accelerator: 6 months (25°C)
  - Hardener: 6 months (25°C)

Subject to re-inspection thereafter. Higher temperature during storage may reduce the shelf life and may lead to gelling in the tin. Frequent temperature cycles may also shorten the shelf life.

Store in tightly closed container in a dry, cool and well ventilated space, keep away from sources of heat and ignition. Recommended storage temperature range is 10°C - 15°C to prolong shelf life for Base only. Best practice would be to store them in separate locations.

### Safety Precaution

- This product is intended for use of professional applicators. Refer to the safety information display on the container and in the safety data sheet (SDS) before using the product.
- Use this product in well-ventilated area, avoid skin contact, spillage on the skin should immediately be removed with suitable cleanser, soap and water.
- Eye should be well flush with water and seek for medical attention immediately upon contact with this product.
- During the application, naked flame, welding operation and smoking is not allowed. Adequate ventilation should be provided.
- The accelerator should never be mixed directly with a peroxide catalyst (such as MEKP, BPO, etc). Mixing would cause a violent reaction, and a fire or explosion could result.
If you have any doubt regarding the suitability of use, refer to Nippon Paint for further advice.
